Technical features / Característica técnicas

Outdoor aluminium structures with a cover, manually adjustable sunshade blades. Depending on the inclination, it is possible to control the sunlight and the degree of natural ventilation of the environment below, thus adjusting the temperature.

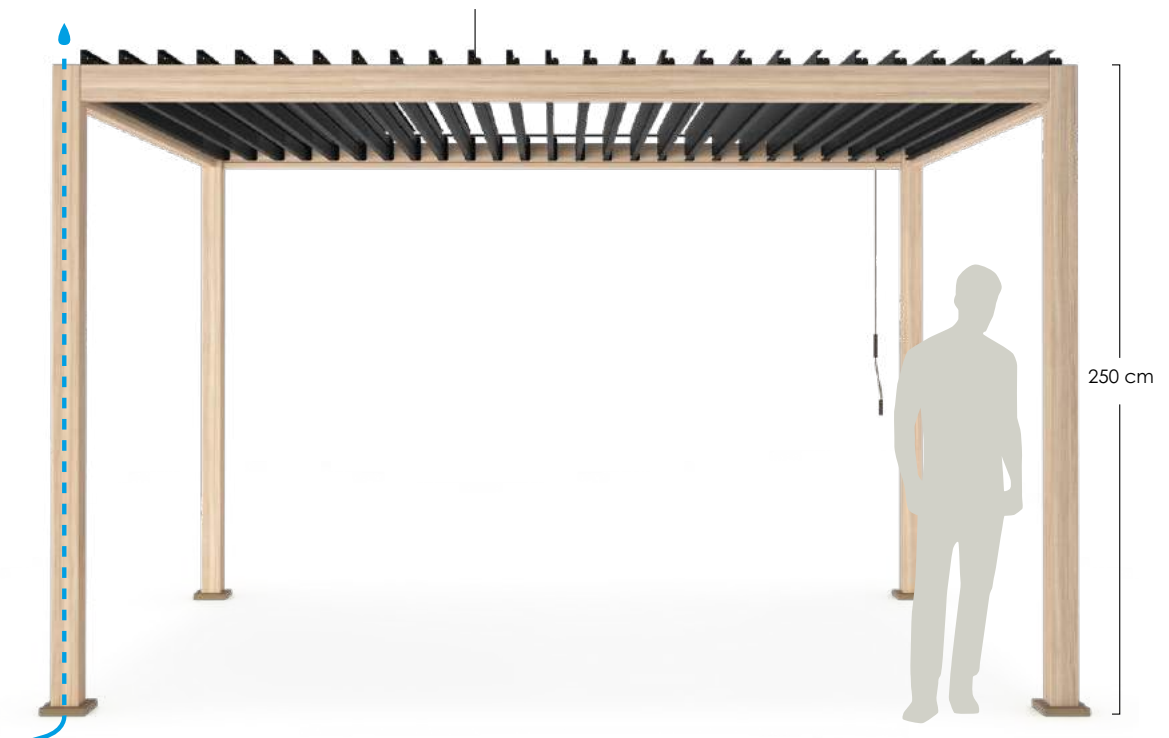

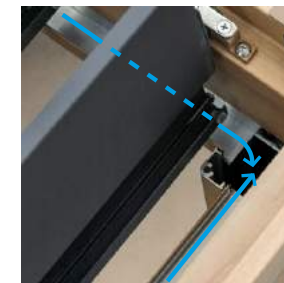

The aluminum structure is characterized by horizontal beams, perpendicular to the legs, which do not require inclination for rainwater drainage. The cover drains the meteoric water to the perimeter structure and the gutters adjacent to the perimeter bring water into the internal drain to the legs.

Available in 4 colour variants, Tyger® powder coating (polyester), a world leader since 1930, offers excellent colour holding performance, corrosion resistance, perfect coating adhesion, yellowing stability and prolonged gloss retention.

Estructuras de aluminio provistas de techo con lamas de protección solar regulables manualmente. Dependiendo de la inclinación, es posible controlar la luz solar y el grado de ventilación natural del ambiente subyacente, regulando así la temperatura.

La estructura de aluminio se caracteriza por tubos horizontales, perpendiculares a las patas, que no requieren inclinación para el drenaje del agua de lluvia. El techo drena el agua de lluvia hacia la estructura perimetral y las canaletas adyacentes al perímetro conducen el agua hacia el desagüe interno en las patas.

Disponibles en 4 variantes de colores, el acabado ofrece excelente resistencia al sol, a la corrosión y a la retención prolongada del brillo gracias al recubrimiento en polvo Tyger® (poliéster), líder mundial desde 1930.
